

A better image, for every body

Introducing the new Symbia Pro.specta SPECT CT

Tift Regional Medical Center recently added a new, second SPECT CT unit as part of its commitment to provide life-enhancing healthcare through the use of advanced technologies.

A SPECT/CT is a combination of a SPECT (Single Photon Emission Computed Tomography) scan with a CT (Computed Tomography) scan. By integrating both of these exams, the technology creates a very detailed and informative diagnostic study by showing both the patient's anatomy and physiology.

The new Symbia Pro.specta SPECT CT takes this even further by offering reduced dosing without compromising image quality. Symbia Pro.specta SPECT CT also has dual scanning and the ability to overcome the effects of orthopedic metal artifacts in challenging exams.

Types of SPECT/CT Scans available:

- ✓ Whole body bone
- ✓ 3 phase bone
- ✓ Parathyroid
- ✓ Octreotide
- ✓ Infection imaging using white blood cells
- ✓ Hemangioma
- ✓ Sentinel node for breast cancer and melanoma
- ✓ Accessory spleen

PROVIDERS CAN MAKE A REFERRAL TO TIFT REGIONAL MEDICAL CENTER'S CENTRAL SCHEDULING BY CALLING 229-353-7899 OR 866-554-TRMC (8762)
